

U-SOLVE

Urban sustainable development **SOL**utions Valuing Entrepreneurship

About U-solve

The implementation of the United Nations 'Sustainable Development Goals' in urban areas is of crucial importance to make our cities sustainable, livable and resilient over the long term. Vibrant entrepreneurial ecosystems can bring a valuable contribution in designing innovative solutions that have a positive impact against the negative effects of climate change. To ensure potential entrepreneurs, especially young people, can turn ideas into actual businesses, an enabling ecosystem, supported by public authorities, is needed. U-SOLVE intends to enhance support to young entrepreneurs in urban areas with focus on the environment and sustainable development. The project will create experimental pathways for place-based strategies, suitable for the Mediterranean countries, where the entrepreneurial energy is oriented towards sustainable and integrated territorial development.

Project Objective

To create a model of urban development based on innovative entrepreneurship, addressing sustainable development challenges, boosting urban business ecosystems, and creating jobs in emerging social and environmental markets.

Who will benefit?
