WHAT

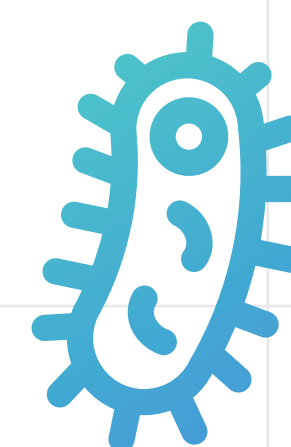

The core of the exhibition is a collection of solutions, case studies and methodologies with a special focus on non-conventional water use at urban and rural level.

Readymade prototypes and customized scale models, demonstrating how some of the processes such as constructed wetlands system work, are showed in an easy way to reach both technicians and the general public.

The aim is to inform and to raise awareness engaging the visitors. The proposed solutions modules are supported by videos, projections and soundscapes.

MEDWAYCUP is part of a cluster of projects that are contributing to a wider ambition, addressing “water scarcity” and related common challenges for the Mediterranean region as identified by the 2014-2020 ENI CBC “Mediterranean Sea Basin Programme”.

ENI CBC Med is the largest Cross-Border Cooperation (CBC) initiative implemented by the EU under the European Neighbourhood Instrument (ENI).
