

# MONITORING TOOLS TO HELP PILOT CITIES EVALUATE THEIR PROGRESS

Jordan University of Science and Technology (JUST) has designed a monitoring and evaluation plan that will help pilot cities to measure their progress throughout the MED-InA experiment. This ready-to-use framework will allow them to know in advance the possibility of achieving the stated objectives and targets, and in case needed to readjust or readapt. Project leader E3D provided expertise on sociological aspects, while the three partner municipalities provided expertise on technical aspects and confirmed feasibility of the selected procedures in their context.
