AIM AND POTENTIAL: The methodology aims to develop physical and virtual tools to stimulate participatory processes, supporting university building managers with predictive tools and enhancing their capacity to plan and implement sustainable energy mix strategies and technologies in Mediterranean

TYPE: Methodology

CATEGORY: Strategy and planning

STAKEHOLDERS: Local public authorities, SME, higher education and research and general public

SCOPE: Educational buildings

LEVEL OF REPLICABILITY: High

AVAILABLE LANGUAGES: English

SUCCESSFUL CASES AND CONSTRAINTS: The methodology has successfully been applied in Tunisia, Italy, Spain, and Palestine. This methodology can be adapted to establish the sustainable LL with a special focus on educational and health buildings. The inputs needed are: an enlarged list of stakeholders, specifications of local living labs to be established in partners' countries and a consolidated list of tools/toolkits based on the available outputs of the SRPs.
