AIM AND POTENTIAL: The objective of this tool is measure the resource consumption and activities carried out in the demo building and convert this in the environmental impact due to the supply of resources and assimilation of waste generated. The data collected from demo buildings are divided in 5 groups: building consumption, product consumption, mobility, food and end of life.

TYPE: Tool

CATEGORY: Measurement and assessment

STAKEHOLDERS: Local, national and regional public authorities, SME, enterprise except SME, sectorial agency and general public.

SCOPE: Public buildings

LEVEL OF REPLICABILITY: High

AVAILABLE LANGUAGES: English

SUCCESSFUL CASES AND CONSTRAINTS: The tool has successfully been applied in Italy, Slovenia, Croatia and Bosnia-Herzegovina. The mobile app is more user-friendly and even it has less indicators could be more replicable to other zones and typologies, because it can be downloadable in any android phone.

RELATED RESOURCES: Guidelines to use the Calculator; guideline for energy efficiency monitor and management in public buildings; and platform.
